

WISE®

PHU 2*3 2-Layer Holding Cabinet

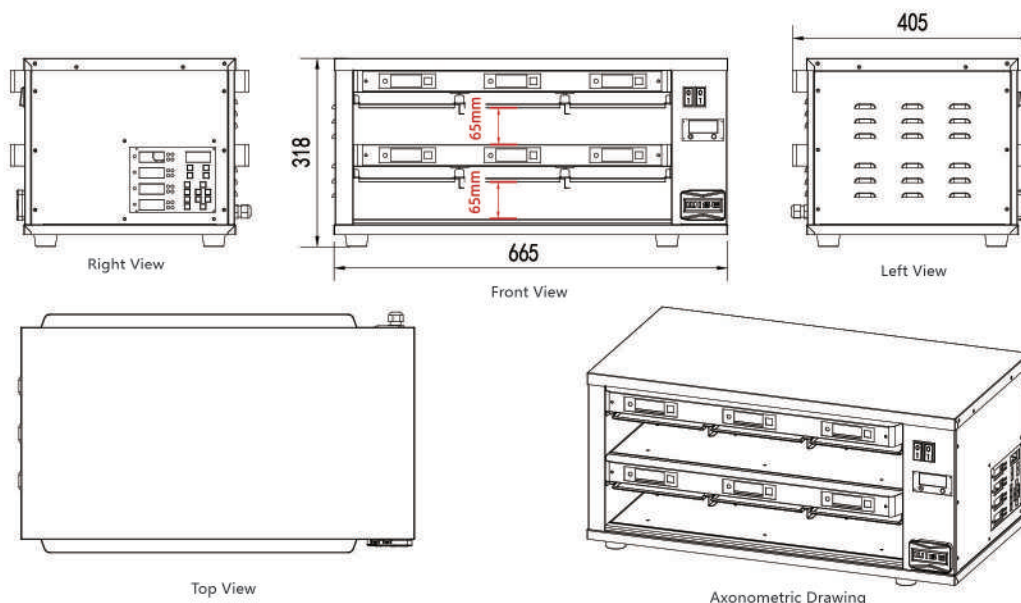

Model ☐ WEHT-8402C2

Technical Features:

- The LED digital display screen is clear and intuitive, facilitating users to quickly read the device status and set parameters.
- The high-efficiency insulation system adopts an upper and lower aluminum plate heating + computer-precise temperature control design, ensuring uniform and stable insulation temperature and effectively extending the insulation duration.
- The body adopts an integral frame structure and a 304 stainless steel outer surface design, balancing stability and aesthetics.
- Supports custom heat preservation temperature and time, and parameters can be flexibly adjusted according to the characteristics of the ingredients.
- The dual-channel design makes it convenient for users to access food from both the front and back directions. Both the front and back sides of the machine are equipped with timing displays, which synchronously show the heat preservation time, making it more convenient to check.
- The pre-alarm function provides real-time alerts on the completion of food insulation time, allowing for precise control of operation schedules even during busy periods.
- It supports the installation of covers as needed to further optimize the uniformity of food temperature and the retention effect of humidity, ensuring long-term temperature preservation quality.
- It supports independent temperature control at different layers, and the insulation temperature of each layer can be set and adjusted separately.
- An independent layer switch is added on the outside. When not in use, the corresponding layer can be turned off to achieve energy conservation and power saving.
- The screen can clearly display the English names and time information of the food inside the insulated cabinet.
- It is equipped with a menu mode display function, allowing users to switch between exclusive menu combinations for different time periods at any time (such as breakfast, lunch, dinner, and late-night snack menus, etc.).
- Add status indicator lights to visually display the real-time status of the dishes.
